FINTECH OPPORTUNITY BRIEF / OCTOBER 2026

Payments move. Business problems remain.

A startup concept for explaining, reconciling and resolving complex B2B payments.

WHERE THE GAPS REMAIN

01

Exception resolution

Short, duplicate or unidentified payments still trigger investigations.

02

Complex reconciliation

Many invoices, partial payments and deductions complicate matching.

03

Cross-border certainty

Businesses need clear costs, arrival times and reasons for delays.

04

Shared business controls

Approval, supplier and accounting evidence spans separate systems.

05

Invoice disputes

Price, quantity and delivery disagreements delay collections.

06

AI purchasing controls

Delegated authority must connect to purchases and fulfillment.

RECOMMENDED IDEA

Payment Resolution Studio

Help finance teams explain and resolve payments their bank and ERP cannot automatically reconcile.

Start with one segment: businesses receiving consolidated payments against many invoices. Connect existing systems; keep approved financial actions under explicit controls.

ONE REALISTIC WORKFLOW

Illustrative case: $100,000 owed across 12 invoices. Customer pays $97,300; remittance identifies a $2,000 deduction and a $700 fee.

1 COLLECT

Invoices, bank records and remittance documents.

2 EXPLAIN

Suggest matches and show evidence for the difference.

3 RESOLVE

Approve adjustments, post them and track the dispute.

BUILD A FOCUSED FIRST PRODUCT

Buyer: Head of Accounts Receivable / Finance Operations.
MVP: File imports, evidence-based matching, case queues and approval history.
Measure: Investigation time, unresolved value and case closure time.

Validate first: Ask five finance teams to walk through their last ten unresolved payments.
Differentiate: Solve one recurring exception type in one industry.
Founder fit: Banking, VAM, rules and workflow expertise.

Competitive reality: Modern Treasury and Nilus already offer reconciliation capabilities. This is a focused product hypothesis, not a claim of an empty market or proven demand.

EVIDENCE & RESEARCH LIMITS

Initial scan: two web searches; search summaries only, not full-page diligence. Industry sources support the pain points; prioritization and product design are analysis. No customer validation or market sizing completed.

Federal Reserve: B2B processing

BIS: Cross-border payments

Modern Treasury: Exceptions

Nilus: Product overview
